✅ Prerequisites — Movie Oracle

Everything you need before running the project.

---

1. Node.js (v18 or higher)

Download from nodejs.org — pick the **LTS** version.

Verify install:

```bash
node -v   # should print v18.x.x or higher
npm -v    # should print 9.x.x or higher
```

---

2. Git

Download from git-scm.com.

Verify install:

```bash
git --version   # should print git version 2.x.x
```

First time using Git? Set your identity:

```bash
git config --global user.name "Your Name"
git config --global user.email "you@example.com"
```

---

3. Anthropic API Key

1. Go to console.anthropic.com
2. Sign up or log in
3. Navigate to **API Keys** → **Create Key**
4. Copy the key — it starts with `sk-ant-...`
5. Paste it into your `.env` file:

```env
```

```
VITE_ANTHROPIC_API_KEY=sk-ant-api03-xxxxxxxxxxxxxxxx
```

> ⚠️ Never share or commit this key. It's already in `.gitignore`.

---

4. A Code Editor

Recommended: VS Code

Useful extensions for this project:

- **ES7+ React/Redux/React-Native snippets**
- **Prettier** — code formatter
- **GitLens** — supercharged Git in VS Code

---

5. A GitHub Account

Sign up at github.com if you don't have one.

Optional but recommended — set up SSH so you don't have to enter your password every push:

```bash
ssh-keygen -t ed25519 -C "you@example.com"
cat ~/.ssh/id_ed25519.pub
# Copy the output and paste it into GitHub → Settings → SSH Keys
```

Quick Checklist

Requirement	Command to verify
Node.js 18+	`node -v`
npm 9+	`npm -v`
Git	`git --version`
API Key	check your `.env` file
GitHub account	github.com

Once all five are checked off, you're ready to run:

bash

```bash
npm install
npm run dev
```
